OCTOBER–DECEMBER 2026

Covers alerts sent from 29 September 2026 to 20 October 2026, including the alerts from our first scans on 29 and 30 September (the members' channel opened on 2 October). Updated weekly until the quarter ends; the final edition follows once every game has settled.
Results as of 3:55pm on Tuesday 20 October 2026, Sydney time.

Every alert Odds Ace sent this quarter: the Aussie price, the US reference price (the US market's price with its margin removed) at that moment, how the price held up before the game, and how each one finished, with the final score. Nothing is left out or added after the fact.

886	77%	68%	3h
alerts sent	beat the US closing price (618 of 800), average +8.1%	had dropped by kick-off at the same bookmaker (421 of 622)	typical time an alerted price lasted (372 followed)

RESULTS SO FAR

	SETTLED	PAPER UNITS
Alerts sent	**864**	**+68.3**

Paper units are hypothetical, with no money staked: a 1-unit stake on every settled alert at the price in the alert; pushes and voids are left out. They show from 20 results.

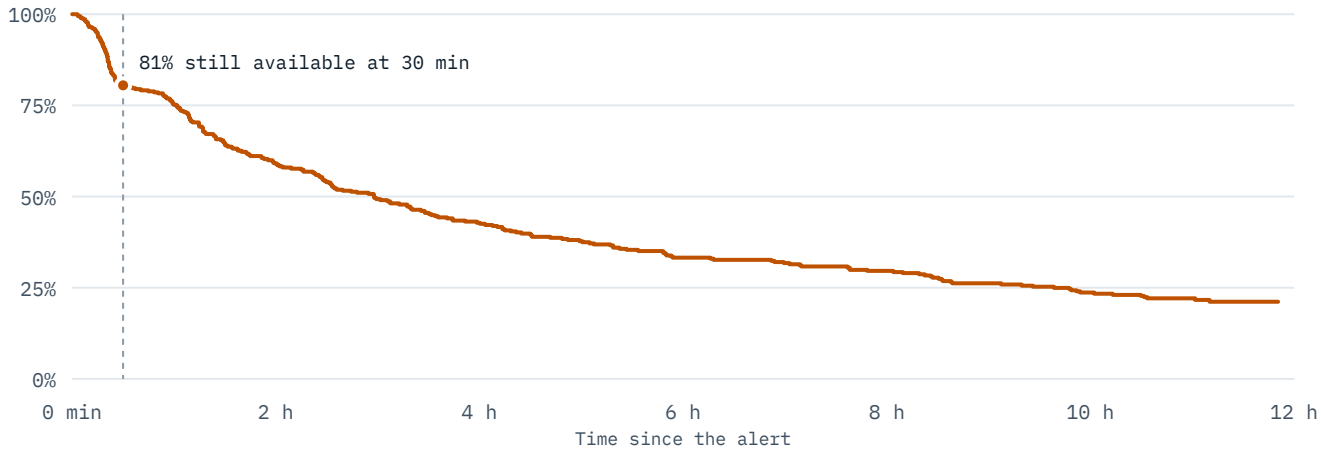

> **Paper results, not advice.** Results use the price in each alert. Prices often move within minutes, and bookmakers can limit accounts, so real results are likely to be lower. Odds Ace is information, not betting advice, and past results don't predict future ones. You can still lose.

HOW THE ALERTED PRICES HELD UP

Each alert compares an Aussie bookmaker's price with the US reference price: the US market's price with the bookmakers' margin removed. Three things show whether those prices were out of line: whether the Aussie price beat where the US market closed, whether the Aussie bookmaker cut the price before the game, and how long the alerted price lasted.

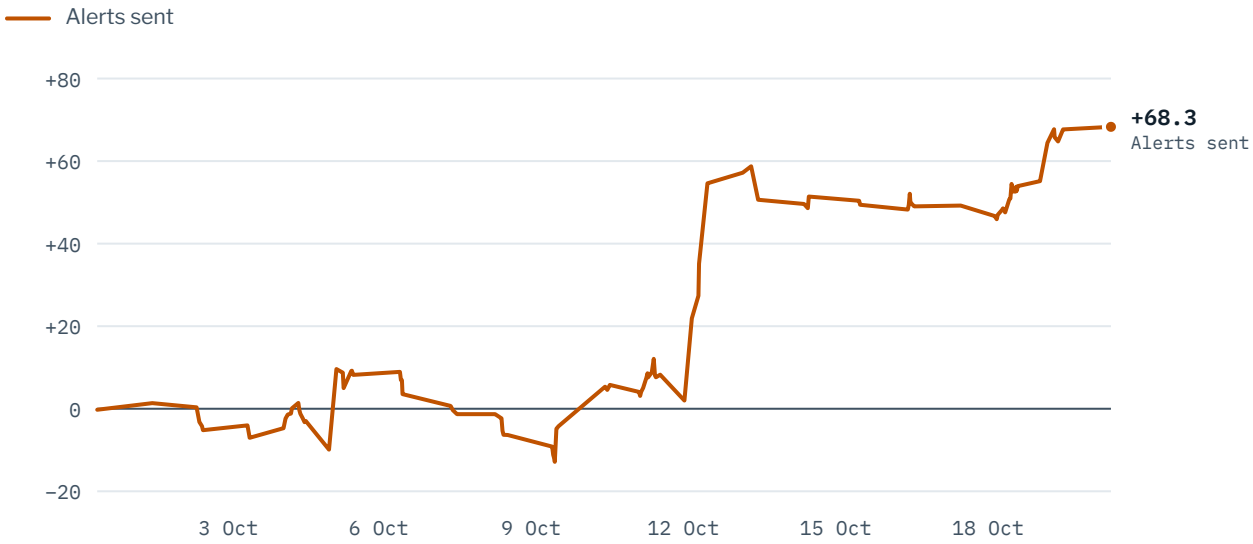

Share of alerted prices still available, by time since the alert (372 alerts followed from their first re-check, 272 seen to move)

After each alert the same bookmaker's price is checked again at each scan until it drops or the game starts. Only alerts first re-checked within 50 minutes count, and a drop is timed halfway between the last check that found the alerted price and the first that didn't. Alerts whose game started first still count until then (a Kaplan-Meier estimate).

HYPOTHETICAL PAPER UNITS OVER TIME

Paper units, added up game by game in order of start time (a hypothetical 1 unit on every settled alert at the alerted price; no money is staked)

WHERE THE ALERTS CAME FROM

Alerts sent, by sport, market and bookmaker. A dash means too few alerts to measure yet: closing value shows from 10 games that have started, kick-off drops from 5 checked alerts, timings from 10 followed alerts, and paper units from 20 results.

TIMING AND SIZE OF THE GAP

How far ahead of the game each alert went out, and how big the gap was between the Aussie price and the US reference price when it did.

By time before the game

ALERT SENT	ALERTS SENT	AVERAGE GAP	BEAT THE US CLOSE	AVERAGE CLOSING VALUE	DROPPED BY KICK-OFF	TYPICAL TIME A PRICE LASTED	SETTLED	PAPER UNITS
More than 24 hours before	557	+11.6%	74% 366 of 492	+6.2%	71% 258 of 361	4 h 10 min	541	+55.2
6 to 24 hours before	188	+17.4%	81% 143 of 176	+13.7%	72% 110 of 153	2 h 30 min	183	+10.2
2 to 6 hours before	75	+9.6%	83% 62 of 75	+8.4%	56% 36 of 64	1 h 5 min	75	+3.8
Under 2 hours before	66	+8.5%	82% 47 of 57	+7.0%	39% 17 of 44	1 h	65	−0.9

By gap at the alert

GAP	ALERTS SENT	AVERAGE GAP	BEAT THE US CLOSE	AVERAGE CLOSING VALUE	DROPPED BY KICK-OFF	TYPICAL TIME A PRICE LASTED	SETTLED	PAPER UNITS
Under 8%	170	+0.8%	50% 80 of 159	+0.5%	67% 85 of 126	2 h 35 min	166	+10.8
8 to 12%	360	+9.5%	90% 293 of 326	+8.0%	62% 139 of 226	2 h 50 min	351	+10.7

THE RECORD

This quarter has 886 alerts, too many to list in a PDF. Every one is in the spreadsheet (CSV) published with this report, with the same columns as below.

Columns in the spreadsheet. **Price**: the Aussie price in the alert. **US reference**: the US market's price with the margin removed. **Gap**: how far the Aussie price was above it. **Last check**: the same bookmaker's price at the last check before the game. **Closing value**: the alerted price against the US reference price at that last check. The note under each result says how it was settled, from the box score.

HOW THIS REPORT WORKS

What's included

Every alert Odds Ace sent with a Sydney date in the period, whatever happened to it. Nothing is removed after the fact and nothing is added. The same records drive the Results section of oddsaceaustralia.com, which updates every hour.

Prices

The Aussie price is the bookmaker's price in the alert. The US reference price is the US market's price at the same moment with the bookmakers' margin removed. The gap is the Aussie price × the US chance − 1. A "sharp-money move" is an alert where US betting figures showed big money on one side and an Aussie bookmaker still offered that side at or near the US reference price (it doesn't need the usual gap).

Closing value and kick-off checks

Before each game the scans record the same bookmaker's price again. Closing value compares the alerted price with the US reference price at the last check before the game: the alerted price × the US chance − 1. Above zero means the alert beat where the US market closed. It counts once the game has started; voided bets are left out. "Dropped by kick-off" compares the alerted price with the same bookmaker's price at the last check before the game. Both measure price, not profit.

Results

Each result is settled from the final score and the box score, with two sources that agree, and recorded with a note starting "Final:". Paper units are hypothetical, with no money staked: a 1-unit stake on every settled alert at the price in the alert; pushes and voids are left out.

What these figures don't show

They're paper results at the alerted price. Prices often move within minutes of an alert, bookmakers can limit or close any account and can void bets they treat as obvious errors, so real results are likely to be lower. Odds Ace is information, not betting advice. Past results don't predict future ones.
