OUR METHOD

METHOD AS AT 27 OCTOBER 2026

Every alert compares an Aussie bookmaker's price with the US reference price (margin removed): the chance the US sportsbooks' own prices give once their margin is taken out, turned back into a price. This page sets out exactly how we get it, and when an alert goes out.

1. Live prices from 8 US sportsbooks

Around the clock, every scan reads the current prices at 8 major US sportsbooks for the same game and market. We don't name them, because they aren't licensed in Australia. Game markets (head to head, line and total) usually have most of the 8 quoting. Player props often have fewer. Since 6 October 2026, an alert needs at least 3 US books on the line its price comes from.

On the Aussie side we check 7 Australian-licensed bookmakers: TAB, Sportsbet, Neds, PointsBet, Unibet, Betr and Betfair.

2. Margin out, then the median

Each US book's two prices (over and under, or each team) are turned into chances that add up to 100%, which takes that book's margin out. We use the median of those chances across the books on the same line, never one book's best price, and there must be at least 3 books, so one book out of step can't set the price. The US reference price is 1 divided by that chance.

3. A correction for NFL overs

US books price the over a little too short on NFL yards, receptions and attempts props, so on most of those we shift the chance slightly towards the under.

4. Goal and touchdown scorers

On goal and touchdown scorer markets (anytime goal in the NHL; anytime, first and last touchdown in the NFL), US books only offer "yes", so there's no other side to take the margin from. We take the median US price, from at least 3 books, and remove an estimated margin: 15% for anytime touchdowns, 22% for anytime goals and 30% for first and last touchdowns. These reference prices are rougher than the rest. Since 10 October 2026 we record scorer alerts but don't send them. Of the 59 that had won or lost by then, 5 won, when their US reference prices pointed to about 8. The one exception, since 27 October 2026, is a trial of NHL anytime goal scorer alerts at Neds, which are sent at any gap. Of the 98 that had won or lost by then, 18 won, when their US reference prices pointed to about 15 and Neds' own prices to about 10.

5. When the lines differ

If the US line is different from the Aussie one (say 40.5 receiving yards in the US and 45.5 here), the price at the Aussie line is estimated with a statistical model of the player's stat, starting from the US line most books quote, which needs at least 3 books on it. Game lines on a different number are estimated from the US line too. These are estimates, not US prices. From 12 to 27 October 2026, a player prop priced this way was recorded but not sent unless at least 5 US books quoted the line it starts from, after 166 with only 3 or 4 books behind them won 86, when their US reference prices pointed to about 97. The pattern didn't last: of the 131 recorded in those two weeks that had won or lost, 79 won, when their US reference prices pointed to about 75, so since 27 October 2026 they're sent again.

6. The gap

The gap is how much higher the Aussie price is than the US reference price: the Aussie price ÷ the US reference price − 1. For example, an Aussie price of 1.80 against a US reference price of 1.65 is a gap of +9.1%. For Betfair, an exchange, we use the price after its 6% commission on winnings.

7. The bar for an alert

An alert goes out when the gap is at least 12% (8% for unders). From 60 to 30 minutes before the start (the golden window), game lines can alert from 5%, but only if the US market has moved and the Aussie price hasn't. A gap of more than 40% isn't sent: it nearly always means the two markets don't match, so it's held back for a check (the one exception is the NHL anytime goal scorer trial at Neds in section 4). For games more than 3 days away, where early markets are thin, an alert needs at least 5 US books instead of 3. From 10 to 27 October 2026, NFL player props on a game 12 to 48 hours away were recorded but not sent, after 74 of them won 31 when their US reference prices pointed to about 43. The pattern didn't last: of the 200 recorded in that time that had won or lost, 111 won, when their US reference prices pointed to about 115, so since 27 October 2026 they're sent again.

8. Close to the start

From 30 to 10 minutes before the start, the golden-window bars still apply, but both prices are loaded again right before deciding, and the gap has to clear the bar against the most cautious US price instead of the median. No new alerts go out in the final 10 minutes.

9. Re-checked before it's sent

Before an alert is posted, the Aussie price is loaded again, and the alert only goes out if the gap still clears the bar. Every alert shows when its prices were taken and when they were re-checked. On the rare occasion the bookmaker's page won't load a second time, it goes out at the price first found. Each alert is also checked against the news, such as injuries and lineups. Since 12 October 2026, an alert is recorded but not sent when the news explains the Aussie price, say a teammate ruled out who leaves a player more of the work. Of the 23 that had won or lost by then, 10 won, when their US reference prices pointed to about 13.

10. Sharp-money alerts

A second, rarer kind of alert, marked SHARP MONEY: US betting figures show big money on one side, and an Aussie bookmaker still offers that side at or near the US reference price. These don't need the 12% gap, but they do need at least 3 US books, and in the last 30 minutes before a game the Aussie price must be at or above the most cautious US price. Since 21 October 2026 we record sharp-money alerts but don't send them. Of the 145 sent that had won or lost by then, 70 won, about what their US reference prices pointed to (69), but only 46% of those with a US closing price beat it, against 91% of price-gap alerts.

What the numbers mean

- A reference price is an estimate of the US market at that moment, not a prediction of the result. Prices move fast, and any bet can lose.
- Every alert's Aussie price, US reference price and gap are recorded when it's sent. After the game it's settled from official box scores and added to our results, wins and losses alike.
- The 12% and 8% bars have applied since 1 October 2026. The first alerts, on 29 and 30 September, used a lower bar.
- The 3-book minimum has applied since 6 October 2026. Earlier alerts in the results include some that rested on 1 or 2 US books (about a fifth of them).
- The rules for the last 30 minutes before a game, and no new alerts in the final 10, have applied since 5 October 2026. A handful of earlier alerts in the results went out less than 10 minutes before the start.
- The 40% limit and the 5-book minimum for games more than 3 days away have applied since 7 October 2026. Earlier alerts in the results include some with gaps over 40%, nearly all on goal and touchdown scorer markets. Since 27 October 2026, NHL anytime goal scorer alerts at Neds are the one exception to the 40% limit (section 4).

- Since 10 October 2026, goal and touchdown scorer alerts are recorded but not sent to members (section 4), apart from NHL anytime goal scorers at Neds, sent again as a trial since 27 October 2026. Since 12 October 2026, so are alerts the news explains (section 9), and since 21 October 2026, sharp-money alerts (section 10). NFL player props 12 to 48 hours before the start (from 10 October) and player props on an estimate from fewer than 5 US books (from 12 October) were recorded but not sent until 27 October 2026, and are sent again since then (sections 5 and 7). The results include alerts sent at every stage, wins and losses alike. Alerts we record without sending aren't in the results, because members didn't get them.
- The results start on 29 September 2026, when the scans began. The members' channel opened on 2 October 2026, so alerts from before then weren't sent to members.
- Weather flags for open-air NFL and MLB games are separate posts about wind and rain, with no prices in them.
- When a rule changes, this page changes with it, and the date at the top says when.
